

When Your Pet Goes the Lawn, Remember, it Doesn't Just Go on the Lawn.

When our pets leave those little surprises, the bacteria from the waste gets washed into our storm drains and pollutes our waterways. So, what can you do? Simple, dispose of the waste properly. This assures it gets treated as it should.

Help Stop Pointless Pollution

Be a part of the cleanup of the waterways in our area

Clean water is important to all of us.

It's up to all of us to make it happen. In recent years, sources of water pollution like industrial wastes from factories have been greatly reduced. Now, more than 60 percent of water pollution comes from things like cars leaking oil, fertilizers from farms and gardens, and failing septic tanks. All these sources add up to a big pollution problem. Each of us can do small things to help clean up our water and that adds up to a pollution solution!

Why do we need clean water?

Clean water is important to our health and economy. Clean water provides recreation, commercial opportunities, fish habitat, drinking water, and adds beauty to our landscape. We all benefit from clean water and each of us play an important role in keeping our surface and ground waters clean.

What's the problem with pet waste?

Pet waste is a health risk to animals and people, especially children. It is a nuisance in our neighborhoods. Pet waste is full of bacteria that can make people sick. When it rains, harmful bacteria are washed into our storm drains and ends up in a lake, stream or marine water. People who eat contaminated fish or shellfish can get very sick. In a Seattle, Washington study, the waste produced by Seattle's dogs and cats is almost equivalent to the amount of human waste that a city the size of Gadsden or Decatur, Alabama would produce. Unless people properly dispose of pet waste, it enters our waters untreated.

Clean Water tip:

How can you care for your pet and help keep our waters clean?

Scoop it up and flush it down the toilet. That's best because your community sewage treatment plant or your septic system can then treat the pet waste.

Seal the waste in a plastic bag and dispose of it in the garbage. (This is legal in most areas, but check local laws.)

Bury small quantities in your yard when it can decompose slowly. Dig a hole one foot deep. Put three or four inches of waste at the bottom of the hole. Cover the waste with at least eight inches of soil. Bury the waste in several different locations in your yard and keep it away for vegetable gardens.
